STUDY BACKGROUND

The survey sought to gain insights into the recommendations made by Dieticians regarding tube feeding formulas. A total of 81 respondents actively participated in this survey, contributing their input via telephone and online channels, with each interview lasting approximately 10-15 minutes. The execution of this survey involved a concerted effort by our team, encompassing online survey programming, internal hosting, data collection, data cleaning, tabulations, and OE Coding Costs.

Programming/Layover/Hosting – 2 Business days,
Fielding – 15 days, Data Cleaning and Labeling &
OE Coding – 1 Business day each,
Tabulations – 2 Business days.

TIMELINE

TARGET RESPONDENT
81 Dieticians

BUSINESS OBJECTIVE

The primary goal of any business is to generate profits. In the healthcare industry, our objective is to increase profit margins by controlling operational costs, while also maintaining project management fees and the cost per interview. Maintaining financial stability allows us to tackle long-term projects and address short-term needs, such as making prompt payments to respondents for potential survey referrals. In this competitive industry, where earnings are based on completed surveys, our focus is on achieving the maximum number of completions to maximize profitability.

RESEARCH OBJECTIVE

There are several objectives to this research survey which include:

- To gauge the level of familiarity with the recommendations regarding tube feeding formulas.
- To understand the diverse types of tube feeding formulas recommended for both paediatrics and adults.
- To know how comfortably Dieticians, recommend tube feeding formulas to their patients either orally or through a feeding tube, as the primary source of nutrition.

SAMPLE SIZE

81 Dieticians

METHODOLOGY ADOPTED

This research study was conducted over a period of 15 days at the start of September by our Research Team. The methodologies adopted for this project include:

1. Online Sampling
2. Computer-assisted Telephone Interviewing (CATI)
3. Phone-to-web Recruitment

Our approach led to approximately 53 online samples and 28 one-on-one telephonic interviews conducted by experienced CATI experts. The Phone-to-web recruiting team provided incentives to motivate respondents to complete the research survey. Offering suitable incentives ensures active participation in the online portion of the study and acknowledges the value of respondents' time.

OPERATIONAL CHALLENGES

Dieticians are a friendly speciality to target. However, most of the dieticians were recommending only 1 or 2 tube feeding patients in a month but we had a minimum requirement of 3 patients, which was the biggest challenge faced in this study. Most of the dietitians were recommending tube feeding only to adults, which was the main aspect observed in the study.

OUR APPROACH TO CHALLENGES FACED

The team focused on the Dietician's quota with the usual reminders and customized emails to get participation at all hours and also we focused on dieticians' referrals, especially from panel and respondents who completed the study. Also, we used to make appointments in order to speak to the respondents directly and sometimes the CATI Team stretched their working hours to ensure that we reached all the quotas within the given time.

EXECUTIVE SUMMARY

The data collection team has endeavored to continuously develop methods of increasing our panels which in turn leads to high participation and timely deliveries. The team has come up with subscription-based programs, referral bonuses, and online research including third-party references, Trade Associations, Directories and Publications to recruit quality members. Also, the one-on-one telephonic interviews with both the current panel and prospects have yielded fruit. Every effort is made to provide accurate information. The information provided is "best available" on the day the data was gathered.

In this survey respondents may have been exposed to information which is considered to be proprietary and confidential. The information may have included, but is not limited to: experimental or hypothetical concepts, product descriptions or data currently under development that may not have been approved by regulatory agencies. The information was being shared for research purposes only and is not intended to promote a product for any clinical use.

SERVICES OFFERED BY MARKELYTICS

Programming/Layover/Hosting, Data Collection, Data Cleaning and Labelling, and Tabulations were among the services made available to the client.

CLIENT FEEDBACK

When the study was officially closed, the client gave a positive email response.

ADDITIONAL INFORMATION

Most of the dieticians were not treating tube feeding formulas, which was the common issue faced in the study. By conducting the survey, we also understood that tube feeding formulas come in a variety of formats and packaging and Dietitians will consider patients' medical diagnosis, nutritional requirements and feeding schedule when recommending a formula.

We were focusing on feedback on new tube feeding formulas (Product X) that are considered for availability in Canada.
