SECTOR HEALTHCARE

RESEARCH OBJECTIVE

To explore the treatment landscape, patient preferences, and challenges in managing rheumatoid arthritis (RA) among rheumatologists in emerging markets, focusing on Asia-Pacific countries.

SAMPLE SIZE

Two hundred fifty rheumatologists across various Asia-Pacific countries (e.g., China, India, Japan, South Korea).

Asia-Pacific region

TARGET COUNTRIES

SPECIALTY

Rheumatology, with a focus on RA specialists.

CHALLENGES

- Accessing rheumatologists in diverse and geographically dispersed markets.
- Overcoming language barriers and cultural differences in data collection.
- Ensuring the representation of rheumatologists with varying levels of experience and practice settings.

DELIVERABLES

- Detailed report summarising rheumatologists' current treatment practices, challenges, and preferences in managing RA patients.
- Comparative analysis highlighting differences and similarities across different Asia-Pacific countries.
- Interactive dashboard for client access to critical insights and data visualisation.

INSIGHTS GENERATED

- Identified common treatment challenges rheumatologists face in emerging markets, such as access to advanced therapies and patient compliance issues.
- Highlighted variations in treatment approaches and preferences among rheumatologists from different countries.
- We explored patient preferences and factors influencing treatment adherence in the Asia-Pacific region.

IMPACT ON CLIENT

- Provided valuable insights for developing tailored marketing strategies and educational initiatives to address the unique needs of rheumatologists and RA patients in emerging markets.
- Informed market entry decisions and resource allocation strategies based on a better understanding regional differences and challenges.
- Facilitated collaboration and partnerships with local stakeholders to improve access to rheumatologic care and optimise patient outcomes.
