& Bangalore

MRRTDM040124

SCENARIOS CREATED

To comprehensively assess the retail experience, several scenarios were created for the mystery shoppers. These scenarios covered various aspects of the shopping journey:

- Inquiry & Assistance Scenario:
 1. Mystery shoppers posed as customers seeking assistance with specific product inquiries
 2. Evaluation criteria included the staff's responsiveness, knowledge, and helpfulness
- Product Availability Scenario:
 1. Shoppers were tasked with finding specific items to assess inventory management
 2. This scenario checked product availability, shelf organization, & staff assistance
- Checkout and Payment Scenario:
 1. Mystery shoppers made purchases and evaluated the checkout process
 2. This assessed waiting times, cashier efficiency, and payment methods
- Store Cleanliness & Organization Scenario:
 1. Shoppers observed and evaluated the overall store cleanliness and organization
 2. This scenario focused on the physical state of the store, including aisle maintenance and signage
- Return and Exchange Scenario:
 1. Mystery shoppers attempted to return or exchange a purchased item
 2. This scenario assessed the store's return policy and staff handling such requests

STUDY BACKGROUND

This mystery shopping case study aims to evaluate the customer experience and service quality of a prominent retail store chain in India. The study will address the challenges faced, sample size, the mystery shopper selection process, and the scenarios created to assess various aspects of the retail experience.

SAMPLE SIZE

A sample size of 50 mystery shoppers was selected, spread across various demographics, including age, gender, and shopping preferences.

TIMELINE

3 Weeks

MYSTERY SHOPPER SELECTION

Mystery shoppers were selected based on the following criteria:

- **Demographics:** Ensuring diversity to represent the store's customer base
- **Experience:** Prior experience in mystery shopping or retail was preferred
- **Unbiased Perspective:** Shoppers without prior association with the retail store chain were chosen
- **Training:** Mystery shoppers were trained to follow specific evaluation criteria and maintain anonymity

DATA COLLECTION

Mystery shoppers visited different store locations at various times and days to capture a wide range of experiences. They documented their observations using standardized evaluation forms designed for each scenario.

CHALLENGES FACED

- **Diverse Customer Base:** The retail store chain caters to a diverse customer base with varying preferences and expectations
- **Inconsistent Service:** Reports of inconsistent service quality across different store locations
- **Inventory Management:** Concerns regarding product availability and inventory management
- **Checkout Process:** Complaints about long waiting times and checkout process efficiency
- **Store Cleanliness:** Issues related to store cleanliness and organization

DATA ANALYSIS

Collected data will be analyzed to identify trends, strengths, and areas for improvement. Mystery shopper feedback will be aggregated to provide an overall assessment of each store location.

EXECUTIVE SUMMARY

This mystery shopping case study for the large retail store chain in India aims to provide insights into the customer experience, service quality, and various aspects of retail operations. The findings and recommendations will help the retail chain enhance its services, improve store operations, and ultimately increase customer satisfaction and loyalty.
